

Santiago Castillo

Senior Product Designer

Six years designing enterprise platforms and early-stage products, most of it as the only designer in the room, working directly with founders and product leads. I own design end-to-end, from research through to high-fidelity UI and the components that ship.

EXPERIENCE

Senior Product Designer Sep 2025 – Present
Banco de Córdoba (Bancor) · Full-time · Córdoba, Argentina

- Own design end-to-end on corporate card management for the bank's business platform: research, user flows, interaction design, high-fidelity UI, and the components that shipped back into the design system. [Case study →](#)
- Mapped and simplified the foreign currency exchange flow, cutting it from 7 screens to 3 and moving the main action to the first screen after interviews showed users abandoning midway. [Case study →](#)
- Design reporting and dashboard views for business users, structuring dense operational data into screens people can read and act on in daily use.
- Shape product direction with the Product team: defining MVP scope, prioritising features against business goals, and deciding when a design is ready for functional analysis versus development.
- Run user research through surveys and in-depth interviews, then design from what comes back rather than from assumptions.
- Extend Monkey DS, the team's design system, and built a reusable repository of cross-cutting security, error and message screens linked from every flow, applying WCAG standards throughout.

Product Designer Nov 2022 – Sep 2025
Devlights · Full-time · Remote

- Led design on PeopleDesk, a B2B SaaS platform built from zero: information architecture, user flows, and the component library behind complex HR workflows across web and mobile. [Case study →](#)
- Designed Strand, a creative analytics product, turning dense campaign data into dashboards teams could read at a glance. [Case study →](#)
- Partnered directly with startup founders and CEOs on most projects, shaping product direction with non-technical stakeholders in teams small enough that design decisions landed the same week.
- Built low and high-fidelity prototypes to validate direction with users before anything reached development, and worked alongside engineers through implementation.

Product Designer Sep 2021 – Present
Upwork · Freelance · Remote

- Deliver feature design, design systems and high-fidelity prototypes for clients across Latin America and the US, with 5.0 ratings on every completed project.

UX/UI Designer Apr 2020 – Sep 2021
Madketing · Córdoba, Argentina

- Designed consumer-facing landing pages, e-commerce and subscription flows end-to-end, building the front-end alongside the design.

CODE & PROTOTYPING

- Built and shipped santicastillo.com in Astro and Tailwind: content architecture, responsive layout and deploy on Vercel. Public repo. [Repo →](#)
- Prototype in code alongside Figma (HTML, Astro, Three.js), using Claude Code, Cursor and the Figma MCP to test ideas as working UI before handoff.

TOOLS

Design: Figma, design systems, component libraries, prototyping, interaction design, mobile-first and responsive design

Research: user interviews, surveys, usability testing

Code and AI: HTML, CSS, Tailwind, Astro, Git, Claude Code, Cursor, Figma MCP

Ways of working: agile and two-week sprints, developer handoff, WCAG accessibility, Jira, Notion
